

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (original): An organic electroluminescence device comprising an anode; a hole transport layer comprising an organic compound; a light emitting layer having an organic compound; an electron transport layer having an organic compound; and a cathode which are stacked, characterized in that the light emitting layer includes an organic host material represented by the following structural formula (1):

and a phosphorescent organic guest material.

2. (currently amended): An organic electroluminescence device according to claim 1, wherein a hole injection layer is provided between the anode and the hole ~~transportation~~ transport layer.

3. (original): An organic electroluminescence device according to claim 1 or claim

2, wherein an electron injection layer is provided between the cathode and the electron transport layer.

4. (currently amended): An organic electroluminescence device according to ~~any one of~~ claims 1 to 3 claim 1, wherein the phosphorescent organic guest material comprises a porphyrin compound represented by the following structural formula (2):

(in the structural formula (2), Q represents -N= or -C(R)=. M represents a metal, a metal oxide, or a metal halide, R represents hydrogen, alkyl, aralkyl, aryl or alkaryl, or a halogenated substituent thereof, T¹ and T² each represents hydrogen or alkyl, or jointly represent a completed unsaturated six-membered ring including a halogen substituent, the six-membered ring is formed of carbon, sulfur and nitrogen ring atoms, and the alkyl moiety contains 1 to 6 carbon atoms).

5. (original): An organic electroluminescence device according to claim 4, wherein M in the phosphorescent organic guest material is platinum.

6. (withdrawn - currently amended): An organic electroluminescence device according to ~~any one of claims 1 to 3~~ claim 1, wherein the phosphorescent organic guest material comprises a compound represented by the following structural formula (3):

(in the structural formula (3), M represents a metal, R¹ to R⁸ each independently includes a hydrogen atom, alkyl group, oxy group, amino group or a hydrocarbon group having at least one carbon atom in the substituent, the number of carbon atoms is 1 to 10 in each of the hydrocarbon moieties, further, R¹ to R⁸ can be selected independently from cyano, halogen, and a-haloalkyl, a-haloalkoxy, amide, sulfonyl, carbonyl, carbonyloxy and oxycarbonyl substituents containing 10 or less carbon atoms, and further, R¹ together with R², R² together with R³, R³ together with R⁴, R⁵ together with R⁶, R⁶ together with R⁷, or R⁷ together with R⁸ can form a condensed benzo ring).

7. (withdrawn): An organic electroluminescence device according to claim 6, wherein M in the phosphorescent organic guest material is iridium.

8. (withdrawn - currently amended): An organic electroluminescence device according to ~~any one of claims 1 to 3~~claim 1, wherein the phosphorescent organic guest material comprises a compound represented by the following structural formula (4):

(in the structural formula (4), M represents a metal, R¹ to R⁶ each independently includes a hydrogen atom, alkyl group, oxy group, amino group or a hydrocarbon group having at least one carbon atom in the substituent, the number of carbon atoms is 1 to 10 in each of the hydrocarbon moieties, further, R¹ to R⁶ can be selected independently from cyano, halogen, and d-haloalkyl, a-haloalkoxy, amide, sulfonyl, carbonyl, carbonyloxy and oxycarbonyl substituents containing 10 or less carbon atoms and, further, R¹ together with R², R³ together with R⁴, R⁴ together with R⁵, or R⁵ together with R⁶ can form a condensed benzo ring).

9. (withdrawn): An organic electroluminescence device according to claim 8, wherein M in the phosphorescent organic guest material is iridium.

10. (withdrawn - currently amended): An organic electroluminescence device according to ~~any one of claims 1 to 3~~claim 1, wherein the phosphorescent organic guest material

comprises a compound represented by the following structural formula (5):

(in the structural formula (5), M represents a metal, X¹ and X² each independently represents an oxygen atom or a sulfur atom, R¹ to R¹¹ each independently includes a hydrogen atom, alkyl group, oxy group, amino group, or a hydrocarbon group having at least one carbon atom in the substituent, the number of carbon atoms is 1 to 10 in each of the hydrocarbon moieties, further, R¹ to R¹¹ can be selected independently from cyano, halogen, and a-haloalkyl, a-haloalkoxy, amide, sulfonyl, carbonyl, carbonyloxy and oxycarbonyl substituents containing 10 or less carbon atoms and, further, R¹ together with R², R² together with R³, R³ together with R⁴, R⁵ together with R⁶, R⁶ together with R⁷, R⁷ together with R⁸, or R⁸ together with R⁹ can form a condensed benzo ring).

11. (withdrawn): An organic electroluminescence device according to claim 10, wherein M for the phosphorescent organic guest material is iridium.

12. (withdrawn - currently amended): An organic electroluminescence device according to ~~any one of claims 1 to 3~~ claim 1, where in phosphorescent organic guest material

comprises a compound represented by the following structural formula (6):

(in the structural formula (6), M represents a metal, X¹ and X² each independently represents an oxygen atom or a sulfur atom, R¹ to R⁹ each independently includes a hydrogen atom, alkyl group, oxy group, amino group or a hydrocarbon group having at least one carbon atom in the substituent, the number of carbon atoms is 1 to 10 in each of the hydrocarbon moieties, further, R¹ to R⁹ can be selected independently from cyano, halogen, and α -haloalkyl, α -haloalkoxy, amide, sulfonyl, carbonyl, carbonyloxy and oxycarbonyl substituents containing 10 or less of carbon atoms and, further, R¹ together with R², R³ together with R⁴, R⁴ together with R⁵, R⁵ together with R⁶, R⁷ together with R⁸, R⁸ together with R⁹, R⁹ together with R¹⁰, or R¹⁰ together with R¹¹ can form a condensed benzo ring).

13. (withdrawn): An organic electroluminescence device according to claim 12, wherein M in the phosphorescent organic guest material is iridium.

14. (currently amended): A material for an organic electric field light emitting device material which is a compound represented by the following structural material (1):
